

KIONE : THE ROBOT WHO EXPLAINS THE USE OF DIGITAL DEVICES RELENTLESSLY, IN A FRIENDLY MANNER

EDUCATE PEOPLE ON NEW IOT USAGES

Robots can facilitate discovery and enhance opportunities for learning

ENTERTAIN WHILE WAITING

KiOne is always available. It interacts playfully even in busy times.

AMAZE, GIVE EMOTIONS

The demos are attractive, they highlight key aspects, and enable differentiation from classic animations.

FACILITATE SALES

The consumer takes an educated decision on the value of the connected object.

DEMONSTRATE ANY IOT DEVICE IN STORES

LEASURE

SMARTWATCHES

HOME AUTOMATION

HEALTH

The Connected Objects market is attracting greater attention from consumers. Interest for these objects is no longer limited to geeks. Yet people may find them complex or intimidating.

These objects only display their full capabilities when connected to a smartphone.

A demonstration is required to coach and excite the user on the value and interactive nature of the object.

Key Infuser's unique proposal is a robotized demonstration platform for connected objects: when a customer pushes a button, the robot interacts with the connected objects and the application on the smartphone, as a person would do, in a consistent and repeatable way.

The potential buyer is attracted and sees in real time how the object works, creating intimacy and desire for the product.

The interactions with customers are recorded in the Cloud for the vendor **to observe customers' interest.**
